

Tape application module for SOPPEC DRIVER™

One trolley for all your marking applications

The **SOPPEC DRIVER™** trolley was developed to perform a straight marking. Through its stability and compact design, it secures a perfect application, quickly and easily on all industrial grounds. Designed for line marking with aerosol paint – using the SOPPEC TRACING PRO paint – it can also be **set-up with the ground marking tape application module** to extend the use indoors, in your workshop or warehouse areas.

For the first time on the market, with the **tape application module** for the **SOPPEC DRIVER™**, the user is enjoying two quick and simple application modes with one single trolley:

- **the ground marking paint** for line marking on parking or industrial grounds, outdoor or indoor.
- **the self-adhesive tapes** for Workplace Safety marking or Visual Management (LEAN) on smooth surfaces indoor.

PRODUCT BENEFITS

- Combined with the **SOPPEC DRIVER™**, the **tape application module** for the **SOPPEC DRIVER™** benefits from all the assets of the SOPPEC DRIVER™ trolley:
 - The **rectilinear drive** of the trolley which helps the straight application of the adhesive tapes.
 - The tight mounting which secures the **proper control** and the **perfect adhesion** of the ground tapes.
 - The **agility and compactity** of the device which allows side or front marking alongside obstacles (walls, rack feet, ...).
 - The **easy set-up with no-tool** which provides the ability to switch almost instantly from marking paint to marking tape.
- The product **set-up is extremely fast**: unscrew the aerosol holding system, swing it back upside down into the rear slot with the can in-place* or screw it on the handle bar, position the tape kit instead, set-up the roll on the tape holder adjusting the side flanges accordingly to the tape width, and start the tape application!...
- When set-up in position, the tape application module elevates the 2 front wheels of the SOPPEC DRIVER™ trolley, and then the **rubber application roll** is securing the necessary pression onto the self-adhesive tape. The 2 back wheels keep the overall straightness of the drive.
- The tape application module can be used with **50, 75 or 100 mm wide tapes**. **
- It was designed for all It fits with all types of linerless adhesive tapes (tapes with no silicone protection foil) on 75 mm internal core diameter internal diameter core.

* NB: before swinging the aerosol holder and the can, you shall disengage the can nozzle from the nozzle activator to prevent from any unexpected spray.

** NB: the wider the tape, the harder to drive the trolley ahead; the straightness of the marking could be impacted.
